

## ABSTRACT

An active energy beam-curable composition for optical material is provide that comprises (A) a di(meth)acrylate represented by the following formula (1) and (B) a mono(meth)acrylate represented by the following formula (2) and/or a mono(meth)acrylate represented by the following formula (3), wherein the active energy beam-curable composition contains 10 to 90 wt % of the component (A) and 90 to 10 wt % the component (B) on the basis of the total weight of the components (A) and (B).

In formulae,  $\text{R}_1$  and  $\text{R}_3$  independently represents a hydrogen atom or a methyl group,  $\text{R}_2$  and  $\text{R}_4$  independently represents a hydrogen atom, a methyl group or an ethyl group,  $\text{R}_5$  to  $\text{R}_8$  independently represents a hydrogen atom, a methyl group or a bromine atom, and  $l$  and  $m$  independently represents an integer of 1 to 6,  $\text{R}_9$  represents a hydrogen atom or a methyl group,  $\text{R}_{10}$  represents a hydrogen atom or a methyl group.
